

Daffodil International University
Faculty of Science & Information Technology
Department of Computer Science and Engineering
Mid Semester Examination, Spring-2024
Course Code: CSE213 Course Title: Algorithms
Level: 2, Term: 1

Exam Duration: 1.5 Hours

Marks: 25

Answer ALL Questions [Optional]
[The figures in the right margin indicate the full marks and corresponding course outcomes. All portions of each question must be answered sequentially.]

<p>1. Analyze the time complexity of the following code:</p>																			
<pre> a) for(i=0; i*i<=n; ++i) { sum=sum+i; } for(j=0; j<=n; ++j) { sum=sum+j; } </pre>	<pre> b) if(n%2==0) { for(i=1; i<=n; ++i) { for(j=1; j<=n; ++j) { printf("Anything"); } } } else { for(j=1; j<=n; ++j) { printf("Anything"); } } </pre>	<p>[2.5 + 2.5]</p>	<p>CO1</p>																
<p>2. Apply a sorting algorithm that does not follow the divide and conquer method on the following data to sort them in increasing order and show step by step simulation. [15, 5, 49, 36, 27, 6, 1, 43, 29, 30]</p>		<p>[5]</p>	<p>CO2</p>																
<p>3.</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <th>Character</th> <td>H</td> <td>E</td> <td>L</td> <td>O</td> <td>A</td> <td>P</td> <td>_</td> </tr> <tr> <th>Frequency</th> <td>105</td> <td>25</td> <td>21</td> <td>90</td> <td>14</td> <td>54</td> <td>38</td> </tr> </table> <p>Given the above informative Table if someone wants to send a message "HELLO_APP" Applying Huffman coding techniques what will be the huffman encrypted message [i.e. Character wise encrypted Huffman code]. Show all the necessary steps.</p>	Character	H	E	L	O	A	P	_	Frequency	105	25	21	90	14	54	38		<p>[5]</p>	<p>CO2</p>
Character	H	E	L	O	A	P	_												
Frequency	105	25	21	90	14	54	38												

<p>4. Suppose you are looking for a book in a Library with code number 27. The library has many books and the books are sorted by code number on the bookshelf. Unfortunately you have entered the library at the back side of the library [i.e for the given example below your starting position is in front of Book number 64]. Now you have to find out the book with code 27 and you will be given some Book code numbers. Apply an appropriate algorithm to find out the book as early as possible and show all the necessary steps. [64 51 43 42 38 30 27 23 15 7]</p>	[5]	CO3																		
<p>5. Kakababu is a famous character in a Bangla short story. Basically he likes adventures and discovering historical and mysterious things. One day he and his nephew Shontu travel in the Arab country and they find a cave that contains some valuable stones. They were very delighted to collect the stones but unfortunately they had only a bag that can carry only 10kg. Shontu is your best friend and Shontu wants help from you to choose the stones that they can carry and make the best profit. Apply an appropriate algorithm to help Shontu.</p> <table border="1" data-bbox="284 772 1241 1153"> <thead> <tr> <th>Stones</th> <th>Value</th> <th>Available Unit</th> </tr> </thead> <tbody> <tr> <td>Diamond</td> <td>5</td> <td>3</td> </tr> <tr> <td>Pearl</td> <td>7</td> <td>2</td> </tr> <tr> <td>Ruby</td> <td>8</td> <td>5</td> </tr> <tr> <td>Sapphire</td> <td>3</td> <td>4</td> </tr> <tr> <td>Emerald</td> <td>10</td> <td>1</td> </tr> </tbody> </table> <p>[NB: They can partially take any stones and the stones are limited.]</p>	Stones	Value	Available Unit	Diamond	5	3	Pearl	7	2	Ruby	8	5	Sapphire	3	4	Emerald	10	1	[5]	CO3
Stones	Value	Available Unit																		
Diamond	5	3																		
Pearl	7	2																		
Ruby	8	5																		
Sapphire	3	4																		
Emerald	10	1
